

Steel Drum Production Plant

Steel Drum Production Plant:

The plant began operations in 2000, with the main purpose of satisfying the internal demand in the industrial site. It produces steel drums of up to 50 gallons in two versions: TH and OH.

Since drums are a key packaging option for our product line, we have adequate physical space, qualified personnel and cutting-edge technology for their production. The plant has an installed capacity of 400,000 drums / year, with three daily work shifts.
